DATA VISUALIZATION DESIGN – DESIGN EXERCISE 6

Evaluating and communicating the design

In the sixth exercise, you were asked to work in a group of 3-5 students to evaluate your project work using a set of heuristics and to then pair up with another group to present and discuss your work and process.

In this hand-in, we ask you to describe what you did in the exercise and reflect on the process and result.

To describe what you did, please attempt to go beyond what you were asked in the exercise. You can include up to ten images/photos in your description – we expect at least one and it is totally fine that members in the exercise group submit the same photos/images.

To reflect on the process, you might consider whether your approach worked, alternative approached that you considered, aspects of your collaboration, inspiration sources and their value, etc. To reflect on the outcome, you might consider the heuristics that you chose to focus on in comparison to what you might have learned about your design if you had used other heuristics, etc.

Finally, remember that there is a hard word limit (400 words), which roughly corresponds to a normal page. It is ok to submit less than that.

Please remember that you need to have at least three of your design exercise hand-ins approved in order to attend the exam (that is, submit the exam project). The hand-in must be submitted on time in order for the hand-in to be passed.
